Is It Time for a Gut Check?

Colorectal cancer affects people of all ages. If you experience a change in bowel habits, talk with your doctor. Early detection saves lives.

Stop colon cancer before it starts

No. 2
Colorectal cancer is the No. 2 leading cause of cancer death in men and women in the U.S.

50
The Centers for Disease Control and Prevention recommends regular screening beginning at age 50 to prevent colorectal cancer.

3X
Those with a parent, sibling or child who has colon cancer are up to 3 times more likely to develop the disease.

92%
Early detection saves lives. 5-year survival is 92% in cases where cancer has not spread.

Early warning signs include:

Blood in the stool
Abdominal cramping or discomfort
Unintentional weight loss

Dark or black stools
An urge to have a bowel movement when the bowel is empty
A change in the shape of the stool
Constipation or diarrhea that lasts for more than a few days
